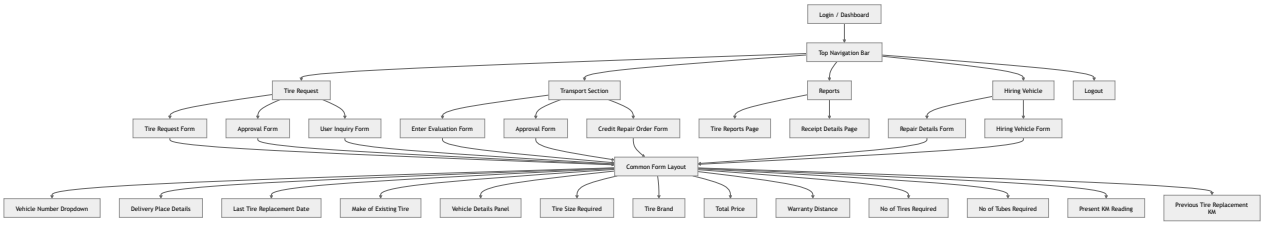
UI Navigation Diagram

Uploaded image Uploaded image Uploaded image Uploaded image Uploaded image
draw the ui diagram for this when i click the tire req it shoul open a form then the for approval and user inquiry same transaport section , Reports , Hiring vehicles also same as the tire req.

Yes — here is a clean **UI navigation diagram** for your Tire Management System based on the screenshots.

You can use this as your **system UI diagram / sitemap**.

UI Navigation Diagram



Simple structure version

```
Tire Management System
│
├── Tire Request
│   ├── Tire Request
│   │   └── Opens Form Page
│   ├── Approval
│   │   └── Opens Form Page
│   └── User Inquiry
│       └── Opens Form Page
│
├── Transport Section
│   ├── Enter Evaluation
│   │   └── Opens Form Page
│   ├── Approval
│   │   └── Opens Form Page
│   └── Credit Repair Order
│       └── Opens Form Page
│

│   ├── Repair Details
│   │   └── Opens Form Page
│   └── Hiring Vehicle
│       └── Opens Form Page
│
└── Logout
```

Page behavior explanation

When the user clicks a main menu item such as **Tire Request**, a dropdown menu appears.
Selecting **Tire Request**, **Approval**, or **User Inquiry** opens a related form page.
The same behavior applies to **Transport Section**, **Reports**, and **Hiring Vehicle**, where each dropdown option opens its own page or form.

Common form layout in the opened page

Most opened pages follow the same layout:

- Header: **Tire Management Form**
- Left section:
  - Vehicle Number
  - Delivery Place Name of Office
  - Delivery Place Street Name
  - Delivery Place Town
  - Last Tire Replacement Date
  - Make of Existing Tire
- Right section:
  - Vehicle Details panel
- Lower section:
  - Tire Size Required
  - Tire Brand
  - Total Price
  - Warranty Distance
  - Number of Tires Required
  - Number of Tubes Required
  - Present KM Reading
  - KM Reading at Previous Tire Replacement

If you want, I can also draw this as a **proper use case diagram** or a **wireframe-style UI diagram** for your report.

can you make figma wire frames if i give a prompt to you? yes / no answer only.

Yes

create a figma wireframe for this fronten ui s given

Here is a **clean Figma-ready wireframe prompt** you can directly paste into tools like **Figma AI / Magician / Locofy / Uizard / v0 / Galileo** 👇

Writing
Prompt: Tire Management System – Figma Wireframe

Design a clean, professional web dashboard UI for a **Tire Management System**.

1. Layout Structure

- Full-width web application layout
- Top navigation bar (dark theme)
- Main content area below with form + side panel
- Use a grid-based layout (2-column structure)

---

2. Top Navigation Bar

- Left: Logo/Text → **"Tire Management System"**
- Center Menu Items (with dropdowns):
  - Tire Request
    - Tire Request
    - Approval
    - User Inquiry
  - Transport Section
    - Enter Evaluation
    - Approval
    - Credit Repair Order
  - Reports
    - Tire Reports
    - Receipt Details
  - Hiring Vehicle
    - Repair Details
    - Hiring Vehicle
- Right:
  - "Hello, Panch"

- Logout button

---

3. Page Header

- Title bar: **"Tire Management Form"**
- Dark header strip below navbar

---

4. Main Content Layout

Split into **two sections**:

LEFT: Form Section (70%)

Create a card-style container with inputs:

- Vehicle Number (dropdown)
- Delivery Place – Name of Office (text input)
- Delivery Place – Street Name (text input)
- Delivery Place – Town (text input)
- Last Tire Replacement Date (date picker)
- Make of Existing Tire (text input)

RIGHT: Vehicle Details Panel (30%)

Card panel showing:

- Vehicle Number
- User Section
- Cost Center
- Vehicle Type
- Vehicle Brand
- Vehicle Model

---

5. Tire Details Section (Full Width Card)

- Tire Size Required (dropdown)
- Tire Brand (disabled input)
- Total Price (disabled input)
- Warranty Distance (disabled input)

---

6. Additional Inputs Row

- No of Tires Required
- No of Tubes Required
- Present KM Reading (with “km” suffix)
- KM Reading at Previous Tire Replacement (with “km”)

---

7. Design Style

- Minimal wireframe (grayscale)
- Use:
  - Rounded cards
  - Subtle shadows
  - Clear spacing (8px grid)
- Inputs: outlined style
- Dropdown indicators included
- Keep it **low-fidelity (wireframe, not final UI)**

---

8. Interaction Notes

- Dropdown menus expand on click
- All menu items open similar form pages
- Layout remains consistent across modules

---

9. Output Requirements

- Desktop frame (1440px width)
- Components:
  - Navbar
  - Form Card
  - Side Info Panel
  - Input Fields
- Use Auto Layout in Figma

Design should resemble an **enterprise internal system dashboard** (clean, structured, functional).

If you want next step, I can:

- Convert this into **actual Figma frame layout with spacing (px-perfect)**
- Or generate **React / HTML code from this UI**

Convert this into actual Figma frame layout with spacing

Perfect — here is your **pixel-perfect Figma frame layout (ready to build directly in Figma)** 👇

Writing

🎯 Figma Frame Setup (Desktop)

Frame

- **Size:** 1440 × 1024
- **Layout Grid:**
  - Type: Columns
  - Count: 12
  - Margin: 80 px
  - Gutter: 24 px

🧱 1. Top Navigation Bar

Frame: Navbar

- Width: 1440
- Height: 64 px
- Padding: 0 80 px
- Layout: **Auto Layout (Horizontal)**
- Alignment: Space Between
- Fill: #1F2937 (dark gray)

Inside Navbar:

Left:

- Text: **Tire Management System**
- Font: 18 px / Bold / White

Center Menu (Auto Layout Horizontal)

- Gap: 32 px

- Items:
  - Tire Request ▼
  - Transport Section ▼
  - Reports ▼
  - Hiring Vehicle ▼
- Font: 14 px / Medium / #D1D5DB

Right:

- Auto Layout (Horizontal)
- Gap: 16 px
- “Hello, Panch”
- Logout Button:
  - Padding: 8 × 16
  - Border: 1px #9CA3AF
  - Radius: 6 px

📃 2. Page Header

Frame: Header Bar

- Width: 1280 (inside margins)
- Height: 48 px
- Position: 80 px from left
- Margin top: 24 px
- Fill: #111827

Text:

- “Tire Management Form”
- Font: 16 px / Medium / White
- Padding left: 16 px
- Vertical center aligned

📦 3. Main Content Container

Frame: Main Wrapper

- Width: 1280

- Position: Center (margin 80 px)
- Top spacing: 24 px
- Layout: Vertical Auto Layout
- Gap: 24 px

🧩 4. Top Section (Form + Side Panel)

Frame: Top Row

- Layout: Horizontal Auto Layout
- Gap: 24 px

LEFT: Form Card (70%)

Frame: Form Card

- Width: 880 px
- Padding: 24 px
- Fill: #FFFFFF
- Radius: 8 px
- Stroke: #E5E7EB (1 px)
- Layout: Vertical Auto Layout
- Gap: 16 px

Input Field Style:

- Height: 40 px
- Radius: 6 px
- Border: 1px #D1D5DB
- Padding: 0 12 px

Fields (Stacked):

1. Vehicle Number (Dropdown)
2. Delivery Place – Name of Office
3. Delivery Place – Street Name
4. Delivery Place – Town

--- Divider (1px #E5E7EB) ---

5. Last Tire Replacement Date (Date Picker)

6. Make of Existing Tire

RIGHT: Vehicle Details Panel (30%)

Frame: Side Panel

- Width: 376 px
- Padding: 20 px
- Fill: #F9FAFB
- Radius: 8 px
- Stroke: #E5E7EB
- Layout: Vertical Auto Layout
- Gap: 12 px

Title:

- “Vehicle Details” (14 px bold)

Info Items:

Each item:

- Label: 12 px / Gray
- Value: 14 px / Medium

Items:

- Vehicle Number
- User Section
- Cost Center
- Vehicle Type
- Vehicle Brand
- Vehicle Model

🧱 5. Tire Details Section

Frame: Tire Section Card

- Width: 1280
- Padding: 24 px
- Fill: White
- Radius: 8 px

- Stroke: #E5E7EB

Layout:

- Horizontal Auto Layout
- Gap: 24 px

Fields (Equal width):

- Tire Size Required (Dropdown)
- Tire Brand (Disabled)
- Total Price (Disabled)
- Warranty Distance (Disabled)

🔢 6. Bottom Inputs Row

Frame: Bottom Row

- Layout: Horizontal Auto Layout
- Gap: 24 px

Fields:

- No of Tires Required
- No of Tubes Required
- Present KM Reading (suffix: km)
- Previous KM Reading (suffix: km)

All:

- Height: 40 px
- Same input styling

🎨 7. Spacing System

- Section spacing: **24 px**
- Inside card spacing: **16 px**
- Input label gap: **6 px**
- Grid alignment: follow 12-column

🧠 8. Auto Layout Rules (IMPORTANT)

Apply Auto Layout to:

- Navbar
- Main Wrapper
- Form Card
- Side Panel
- Rows of inputs

Set:

- Resize → “Fill Container” for inputs where needed

📐 9. Component Suggestions

Create reusable components:

- Input Field
- Dropdown Field
- Card Container
- Navbar Item
- Label + Input group

⚡ Final Result

You will get:

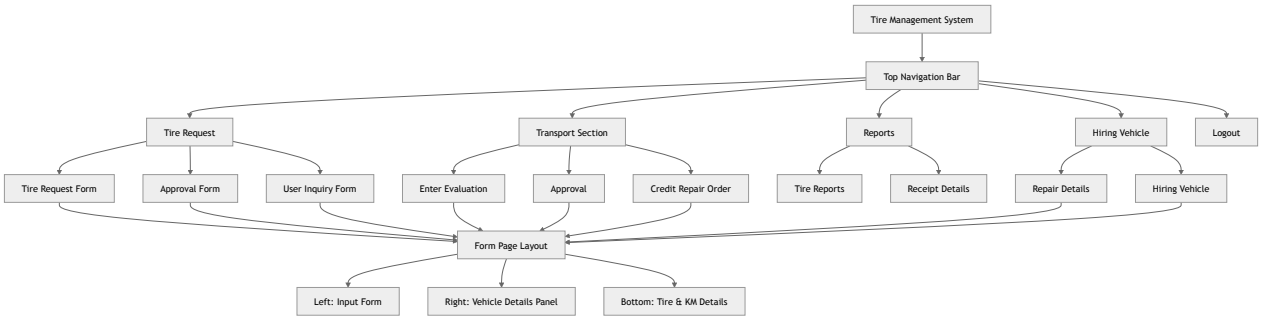
- Clean enterprise dashboard wireframe
- Fully responsive-ready structure
- Consistent spacing system
- Easy to convert into React / Tailwind

If you want next:
👉 I can generate **exact Figma component hierarchy (layer naming)**
👉 Or convert this directly into **React + Tailwind code**

Just follow this in Figma step-by-step — it will match your UI almost exactly.

generate a simple diagram for this without a figma wireframe

Here is a **simple UI diagram (clean & easy)** — not a wireframe, just structure 👇



Even simpler (for report use)

```
Tire Management System
│
├── Tire Request → Opens Form
├── Transport Section → Opens Form
├── Reports → Opens Report Pages
├── Hiring Vehicle → Opens Form
└── Logout

Each Form Page:
│
├── Left: Input Fields
├── Right: Vehicle Details Panel
└── Bottom: Tire & KM Information
```

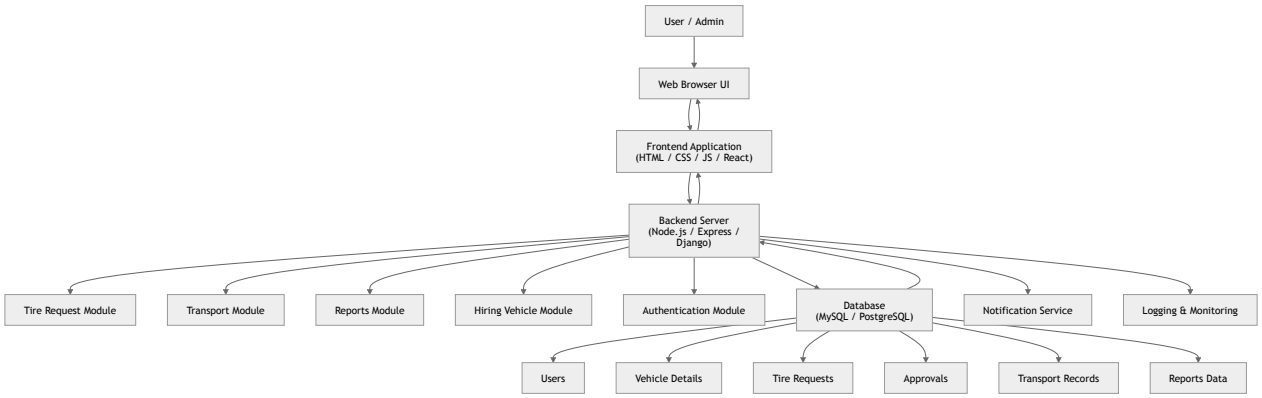
If you want, I can also make:

- **Use case diagram (for marks 💯)**
- **Activity diagram (user flow)**
- **System architecture diagram**

Just tell 👍

system architecture

Here is a **clear System Architecture Diagram** for your Tire Management System 👇



Simple Explanation (for your report)

1. User Layer

Users interact with the system through a web browser.

2. Frontend Layer

The frontend provides the UI (forms, navigation bar, reports).
Handles:

- Input forms (Tire Request, Transport, etc.)
- Displaying vehicle details
- Sending requests to backend

3. Backend Layer

Processes all logic:

- Handles requests from frontend
- Manages modules:
  - Tire Request
  - Transport Section
  - Reports
  - Hiring Vehicles
- Performs validation and approval workflows

4. Database Layer

Stores all system data:

- User accounts
- Vehicle information
- Tire requests & approvals
- Transport and repair records

5. Optional Services

- Notifications (alerts for approvals)
- Logging (system monitoring)

One-line summary (for viva)

👉 *"The system follows a standard 3-tier architecture: frontend UI, backend logic layer, and database, with modular handling of tire requests, transport operations, reporting, and approvals."*

If you want next level (for higher marks):

- I can add **API flow diagram**
- Or **sequence diagram (when user submits tire request)**

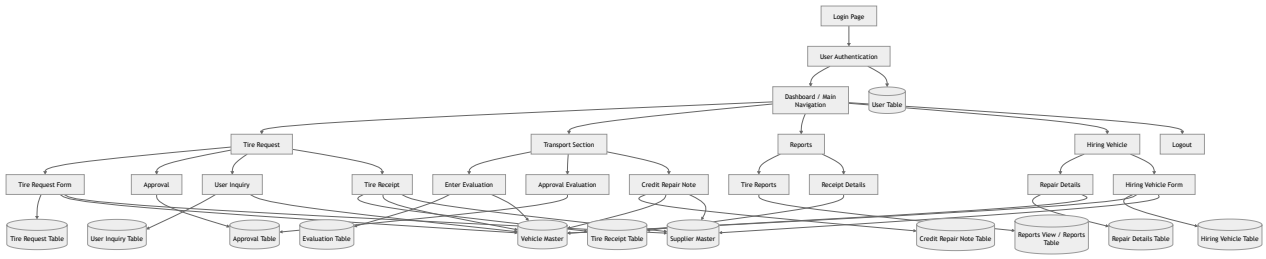
Uploaded image Uploaded image Uploaded image Uploaded image Uploaded image Uploaded image Uploaded image Uploaded image
data we need for the database so include them into the ui flow Diagram give this in a clear way.

Yes — below is a **clear UI flow diagram with the database data needed for each screen/module**.

You can put this directly in your report.

---

1. UI Flow Diagram with Database Connection



2. Main UI Flow Explanation

Login Page

User first logs into the system using:

- Azure login
- Google login
- System user authentication

This checks the **User Table**.

Dashboard / Navigation

After login, the user can access:

- Tire Request
- Transport Section
- Reports
- Hiring Vehicle
- Logout

---

3. Screen-wise UI Flow with Required Database Data

A. Tire Request Module

1. Tire Request Form

This form collects the tire request details.

UI fields:

- Vehicle Number
- Delivery Place Name of Office
- Delivery Place Street Name
- Delivery Place Town
- Last Tire Replacement Date
- Make of Existing Tire
- Tire Size Required
- Tire Brand
- Total Price
- Warranty Distance
- No of Tires Required
- No of Tubes Required
- Present KM Reading
- KM Reading at Previous Tire Replacement
- User Section
- Cost Centre
- Vehicle Type

- Vehicle Brand
- Vehicle Model

Database tables used:

- `vehicle_master`
- `tire_request`
- `supplier_master` if brand/supplier is linked

---

2. Tire Request Approval

Used to approve or reject a tire request.

UI fields:

- Request ID / Serial No
- Vehicle No
- Approval Status
- Approving Officer Service No
- Comments
- Date
- Approved / Rejected

Database table:

- `approval`

---

3. User Inquiry

Used to check request/order status by vehicle.

UI fields:

- Vehicle Number
- Status
- Order Number
- Supplier Name
- Contact Number

Database tables:

- `user_inquiry`
- `tire_request`
- `supplier_master`

---

4. Tire Receipt

From your screenshot, this page includes:

UI fields:

- Credit Repair Note No
- Vehicle No
- Supplier Name
- No of Tires
- Tire Brand
- Unit Price
- Location
- Invoice No

Buttons:

- Show
- Clear
- Create Receipt

Database table:

- `tire_receipt`

B. Transport Section Module

1. Enter Evaluation

This page records the transport officer's inspection/evaluation.

UI fields seen in screenshots:

- Serial No
- Vehicle No
- Vehicle Type
- Vehicle Brand
- Vehicle Model
- User Section
- Last Tire Replacement Date
- Make of Existing Tire
- Tire Size Required
- Tire Brand Required

- No of Tires Required
- No of Tubes Required
- Cost Centre
- Present KM Reading
- KM Reading at Previous Tire Replacement
- KM Run
- Tire Wear Indicator Appeared (Yes/No)
- Tire Wear Pattern
  - one edge
  - middle
  - both edge
  - middle crack
  - sidewall crack
  - normal wear
- Approving Officer Service No
- Comments
- Warranty State (Yes/No)
- Incorrect Alignment (Yes/No)
- Defective Steering System (Yes/No)
- Defective Suspension (Yes/No)
- Purchase Tires (Yes/No)
- Transport Officer's Comments
- Approval Authority Service No

Buttons:

- Save
- Sendmail
- Show
- Select

Database table:

- `evaluation`

---

2. Approval Evaluation

Used by transport/approval authority to approve evaluation.

UI fields:

- Evaluation Serial No
- Vehicle No
- Transport Officer Service No
- Approval Authority Service No
- Approval Status
- Comments
- Approved Date

Database table:

- `approval`

---

3. Credit Repair Note

From screenshot:

UI fields:

- Serial No
- Vehicle No
- Vehicle Type
- Vehicle Brand
- Vehicle Model
- User Section
- No of Tires
- Delivery Address Line 1
- Delivery Address Line 2
- Delivery Address Line 3
- Tire Brand
- Unit Price
- Tire Size
- Supplier Reference Number
- Supplier Name

Buttons:

- Create Order
- Process
- Select

Database table:

- `credit_repair_note`

C. Reports Module

1. Tire Reports

Used to generate reports such as:

- Tire requests
- Approvals
- Evaluations
- Tire usage
- Supplier details
- Receipts

Database sources:

- `tire_request`
- `approval`
- `evaluation`
- `credit_repair_note`
- `tire_receipt`
- `vehicle_master`
- `supplier_master`

---

2. Receipt Details

Used to view receipt and invoice details.

Database table:

- `tire_receipt`

D. Hiring Vehicle Module

1. Repair Details

Possible fields:

- Repair ID
- Vehicle No
- Repair Description
- Supplier / Garage

- Cost
- Date
- Status

Database table:

- **`repair_details`**

---

2. Hiring Vehicle Form

Possible fields:

- Hire ID
- Vehicle Type
- Requested Date
- Requested By
- Supplier Name
- Hiring Cost
- Duration
- Approval Status

Database table:

- **`hiring_vehicle`**

---

4. Database Tables Needed

Here is the clear database structure you can mention.

```
1. users
2. vehicle_master
3. supplier_master
4. tire_request
5. approval
6. user_inquiry
7. evaluation
8. credit_repair_note
9. tire_receipt
10. repair_details
11. hiring_vehicle
12. reports_data or database views
```

5. Suggested Table Fields

users

- user_id

- username
- name
- email
- service_no
- role
- password_hash / auth_provider
- login_type
- status

vehicle_master

- vehicle_id
- vehicle_no
- vehicle_type
- vehicle_brand
- vehicle_model
- user_section
- cost_centre

supplier_master

- supplier_id
- supplier_name
- contact_no
- address
- supplier_reference_no

tire_request

- request_id
- vehicle_id
- delivery_office_name
- delivery_street
- delivery_town
- last_tire_replacement_date
- existing_tire_make
- tire_size_required
- tire_brand_required
- total_price

- warranty_distance
- no_of_tires_required
- no_of_tubes_required
- present_km_reading
- previous_tire_replacement_km
- request_status
- created_by
- created_date

approval

- approval_id
- request_id or evaluation_id
- approving_officer_service_no
- approval_authority_service_no
- status
- comments
- approved_date

user_inquiry

- inquiry_id
- vehicle_id
- order_no
- supplier_id
- contact_no
- status
- inquiry_date

evaluation

- evaluation_id
- serial_no
- vehicle_id
- last_tire_replacement_date
- existing_tire_make
- tire_size_required
- tire_brand_required
- no_of_tires_required

- no_of_tubes_required
- cost_centre
- present_km_reading
- previous_tire_replacement_km
- km_run
- tire_wear_indicator
- tire_wear_pattern
- warranty_state
- incorrect_alignment
- defective_steering_system
- defective_suspension
- purchase_tires
- approving_officer_service_no
- comments
- transport_officer_comments
- approval_authority_service_no
- created_date

credit_repair_note

- credit_note_id
- serial_no
- vehicle_id
- no_of_tires
- delivery_address_line1
- delivery_address_line2
- delivery_address_line3
- tire_brand
- unit_price
- tire_size
- supplier_reference_no
- supplier_id
- order_status
- created_date

tire_receipt

- receipt_id

- credit_repair_note_no
- vehicle_id
- supplier_id
- no_of_tires
- tire_brand
- unit_price
- location
- invoice_no
- receipt_date

repair_details

- repair_id
- vehicle_id
- repair_description
- supplier_id
- amount
- repair_date
- status

hiring_vehicle

- hire_id
- vehicle_type
- supplier_id
- requested_by
- duration
- amount
- approval_status
- hire_date

```

H --> HDB[approval]
I --> IDB[all report tables/views]
J --> JDB[hiring_vehicle + supplier_master]
```

7. Short report-ready explanation

The Tire Management System begins with user authentication and then provides access to several main functional modules through the dashboard. These modules include Tire Request, Transport Section, Reports, and Hiring Vehicle. Each user interface screen is connected to one or more database tables to store and retrieve operational data. For example, the Tire Request form stores request details in the tire_request table while vehicle-related information is retrieved from the vehicle_master table. Similarly, evaluation forms store inspection and approval-related data in the evaluation and approval tables, while receipt and supplier-related details are maintained through tire_receipt, credit_repair_note, and supplier_master tables. This ensures that each UI component is directly supported by a structured backend database design.

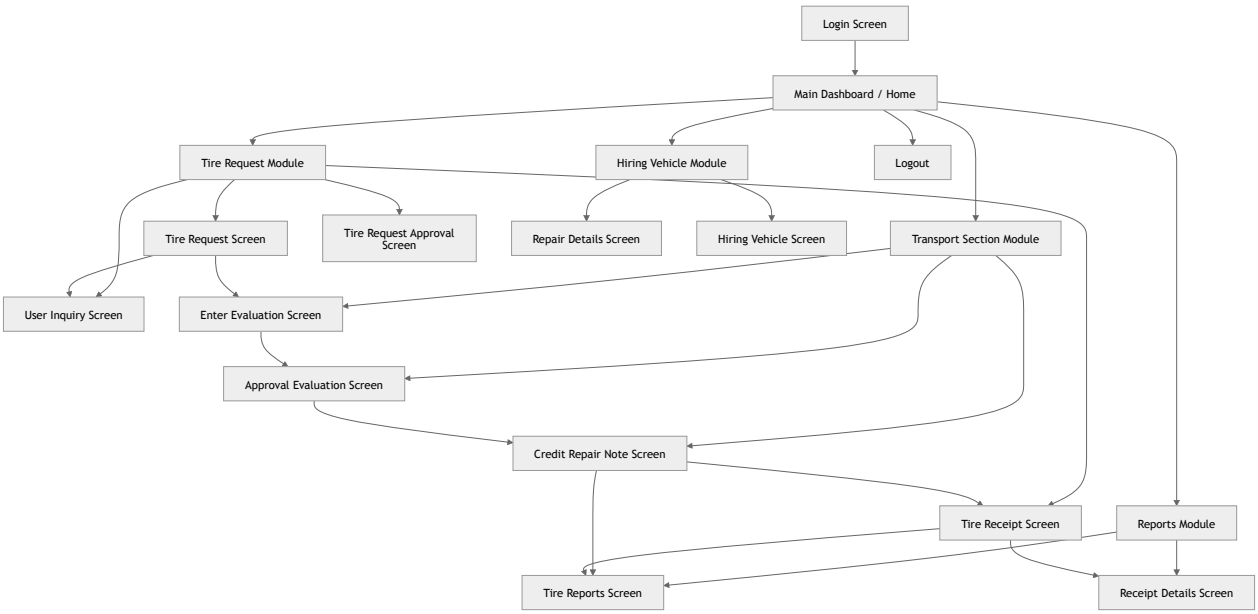
If you want, I can next give this as a **proper ER diagram** matching these screens.

i need the ui screens including those relate to this

Got it — you need the **full set of UI screens** for the system, including the new screens from the images, and how they relate to each other.

Here is a **clear UI screens diagram** plus a **screen list with the main data shown in each screen**.

Complete UI Screens Flow Diagram



1. Main UI Screens

1. Login Screen

This is the first screen.

Functions

- Login with Azure
- Login with Google
- Authenticate user and open system dashboard

Main fields/components

- System logo/title
- Azure login button
- Google login button

---

2. Dashboard / Home Screen

This is the main entry screen after login.

Top navigation

- Tire Request
- Transport Section
- Reports
- Hiring Vehicle

- Logout

Each menu opens a related group of screens.

---

2. Tire Request Module Screens

2.1 Tire Request Screen

This is the main request creation form.

Fields

- Vehicle Number
- Delivery Place Name of Office
- Delivery Place Street Name
- Delivery Place Town
- Last Tire Replacement Date
- Make of Existing Tire
- Tire Size Required
- Tire Brand
- Total Price
- Warranty Distance
- No of Tires Required
- No of Tubes Required
- Present KM Reading
- KM Reading at Previous Tire Replacement

Side panel details

- Vehicle Number
- User Section
- Cost Center
- Vehicle Type
- Vehicle Brand
- Vehicle Model

Purpose

- User enters a new tire request

2.2 Tire Request Approval Screen

This is used to review and approve a tire request.

Fields

- Request Serial No
- Vehicle No
- Approval Status
- Officer Service No
- Comments
- Approval action

Purpose

- Approve or reject tire requests

2.3 User Inquiry Screen

This lets a user check order or request information for a selected vehicle.

Fields from image

- Vehicle Number dropdown
- Status
- Order No
- Supplier Name
- Contact No

Purpose

- Check current request/order status for a vehicle

2.4 Tire Receipt Screen

This screen records the tire receipt after supplier/order processing.

Fields from image

- Credit Repair Note No
- Vehicle No
- Supplier Name
- No of Tires

- Tire Brand
- Unit Price
- Location
- Invoice No

Buttons

- Show
- Clear
- Create Receipt

Additional section

- Tire receipt details table

Purpose

- Confirm that tires were received and invoice details were recorded

---

3. Transport Section Screens

3.1 Enter Evaluation Screen

This is a detailed inspection/evaluation screen.

Fields from images

- Serial No
- Vehicle No
- Vehicle Type
- Vehicle Brand
- Vehicle Model
- User Section
- Last Tire Replacement Date
- Make of Existing Tire
- Tire Size Required
- Tire Brand Required
- No of Tires Required
- No of Tubes Required
- Cost Centre
- Present KM Reading
- KM Reading at Previous Tire Replacement

- KM Run
- Tire Wear Indicator Appeared (Yes/No)
- Tire Wear Pattern:
  - one edge
  - middle
  - both edge
  - middle crack
  - sidewall crack
  - normal wear
- Approving Officer Service No
- Comments
- Warranty State (Yes/No)
- Incorrect Alignment (Yes/No)
- Defective Steering System (Yes/No)
- Defective Suspension (Yes/No)
- Purchase Tires (Yes/No)
- Transport Officer's Comments
- Approval Authority Service No

Buttons

- Save
- Sendmail
- Show
- Select

Other UI parts

- Image upload/preview area
- Request details table at bottom

Purpose

- Transport officer evaluates tire condition and recommends action

---

3.2 Approval Evaluation Screen

This screen is used after evaluation to finalize approval.

Seen in image

- Purchase tires (Yes/No)
- Transport officer comments
- Approve transport officer service no
- Approved button
- Table with:
  - Serial No
  - Vehicle No
  - Select buttons

Purpose

- Review evaluation and approve the transport officer recommendation

---

3.3 Credit Repair Note Screen

This screen is used to create the order / repair note.

Fields from image

- Serial No
- Vehicle No
- Vehicle Type
- Vehicle Brand
- Vehicle Model
- User Section
- No of Tires
- Delivery Address Line 1
- Delivery Address Line 2
- Delivery Address Line 3
- Tire Brand
- Unit Price
- Tire Size
- Supplier Reference Number
- Supplier Name

Buttons

- Create Order
- Process
- Select

Bottom section

- Tire request details table
  - Select
  - Serial No
  - Vehicle No

Purpose

- Generate supplier-side repair/order documentation

---

4. Reports Module Screens

4.1 Tire Reports Screen

This screen displays system reports.

Possible report content

- Tire requests
- Evaluations
- Approvals
- Credit repair notes
- Tire receipts
- Supplier-wise summaries
- Vehicle-wise summaries

Purpose

- Monitoring and reporting

4.2 Receipt Details Screen

This screen shows detailed tire receipt information.

Likely data

- Credit Repair Note No
- Vehicle No
- Supplier Name
- Tire Brand
- Quantity

- Unit Price
- Invoice No
- Receipt Date
- Location

Purpose

- View detailed receipt/invoice data

---

5. Hiring Vehicle Module Screens

5.1 Repair Details Screen

This screen manages repair-related details.

Possible fields

- Repair ID
- Vehicle No
- Repair Description
- Supplier / Garage
- Cost
- Status
- Date

5.2 Hiring Vehicle Screen

This screen handles vehicle hiring requests.

Possible fields

- Hire ID
- Vehicle Type
- Requested Date
- Supplier
- Duration
- Cost
- Approval Status

---

6. UI Screen Relationship in Sequence

Here is the most useful **screen sequence** for your report:

```
Login Screen
   ↓
Dashboard / Home
   ↓
Tire Request Screen
   ↓
Enter Evaluation Screen
   ↓
Approval Evaluation Screen
   ↓
Credit Repair Note Screen
   ↓
Tire Receipt Screen
   ↓
Receipt Details / Reports
```

And for inquiry:

```
Login
   ↓
Dashboard
   ↓
User Inquiry Screen
   ↓
View Status / Order / Supplier Details
```

7. Clear Screen Inventory Table

Module	Screen Name	Main Purpose
Authentication	Login Screen	User login
Main	Dashboard / Home	Main navigation
Tire Request	Tire Request Screen	Create request
Tire Request	Tire Request Approval Screen	Approve request
Tire Request	User Inquiry Screen	Check request/order status
Tire Request	Tire Receipt Screen	Record tire receipt
Transport Section	Enter Evaluation Screen	Evaluate tire condition
Transport Section	Approval Evaluation Screen	Approve evaluation
Transport Section	Credit Repair Note Screen	Create repair/order note
Reports	Tire Reports Screen	View reports
Reports	Receipt Details Screen	View receipt details
Hiring Vehicle	Repair Details Screen	Repair information
Hiring Vehicle	Hiring Vehicle Screen	Hiring process
Main	Logout	End session

---

8. Short report-ready paragraph

The user interface of the Tire Management System consists of multiple linked screens organized under the main modules of Tire Request, Transport Section, Reports, and Hiring Vehicle. After logging in, the user accesses the dashboard and navigates through these modules using the top menu. The Tire

Request module includes screens for creating tire requests, approving requests, checking inquiry status, and recording tire receipts. The Transport Section contains screens for entering tire evaluations, approving evaluations, and generating credit repair notes. The Reports module provides report viewing and receipt detail screens, while the Hiring Vehicle module manages repair and hiring-related operations. These screens are connected in a process flow where tire requests are created, evaluated, approved, ordered, received, and finally reported.

If you want, I can next turn this into a **single polished report diagram with boxes and arrows** that looks more formal than Mermaid.
